

javax.servlet.http.Cookie

=> Cookie is a Text information that stores on client side and this information can access anywhere in web Application.

=> There are 2 types of Cookie

1. In Memory Cookie

2. Persistent Cookie

1. In Memory Cookie

=> such type Cookie should store in Browser memory and it is automatically deleted when browser is Closed.

2. Persistent Cookie

=> Such type Cookie should store for specific Time, after this duration, it is automatically deleted after this duration.

Note: Cookie is applicable only for HttpServlet.

Creating Object of Cookie

```
Cookie ck1=new Cookie("user","analyze");
```

```
Cookie ck2= new Cookie("pswd","Lucknow");
```

How to make Persistent Cookie

```
ck2.setMaxAge(30*24*60*60);//30 days here Time is given in Second
```

Add Cookie on Client Side

```
response.addCookie(ck1);  
response.addCookie(ck2);
```

How to get Data from Cookie

```
Cookie ck[]=request.getCookies();  
  
for(int i=0;i<ck.length;i++)  
{  
    out.print.println("Cookie Name"+ck[i].getName());  
  
    out.print.println("Cookie Value"+ck[i].getValue());  
  
}
```

Updating Value of Cookie

```
ck1=new Cookie("user","Analyze Infotech");
```

Note

_____ Using Program we can not delete Cookie

JSP(Java Server Pages)

=> JSP is a Server Side Scripting Language.

=> Every Scripting Language is Based of Tags, So JSP is also Based on Tags.

=> A JSP File can have HTML, CSS , Java Script and Java Code

=> A JSP file has .jsp extn.

=> Every JSP Page is converted in Servlet by JSP Container.

jspFile.jsp => ServletFile.java => ByteCode.class => Conversion into Machine Code and Execution

Advantages of JSP compare to Servlet

=>A JSP file does not need to structure of Class and Object, it works like scripting Language.

=>A JSP file can have HTML Code normally, it does not need of out.println()

=> Execution of JSP Page is faster than Servlet.

=> A JSP File also support implicit Object for use full classes and Interface.

Implicit Object for JSP File

Page page

PrintWriter out

ServletConfig config

HttpServletRequest request

HttpServletResponse response

HttpSession session

JSP Tags

=> There are 5 types of JSP Tags

1. Directive Tag

=> Directive Tag is used to import specific Class, Package or it is also used to extends Class.

```
<%@page import="java.util.*"%>
```

```
<%@page import="DB.*"%>
```

```
<%@include file="header.jsp"%>
```

E-mail. admin@analyzeinfotech.in, Website: www.analyzeinfotech.in

```
<%@include file="footer.html"%>
```

2. Declarative Tag

=> Declarative Tag is used to declare Variable and function, which can access anywhere in web Page.

```
<%!  
String cname="Analyze";  
String city="Lucknow";  
int sum=0;  
void sum(int n)  
{  
for(int i=1;i<=n;i++)  
{  
sum=sum+i;  
}  
}  
%>
```

3. Scriptlet Tag

=> Scriptlet Tag is most use full Tag in JSP and it can have any valid Statement of Java.

```
<%  
  
int a=10;  
  
int b=20;
```

```
int c=a+b;  
System.out.println("Addition="+c);
```

```
%>
```

4. Expression Tag

=> Expression Tag is used to execute single java Statement and it also prints its output.

```
<%=cname%>
```

or

```
---
```

```
<%
```

```
out.println(cname);
```

```
%>
```

5. Implicit Object

=> JSP supports some use full implicit Objects

Page page
